INDEX

S.No.	Date	Title
1.	22/1/25	Azure Devops Environment Setup.
2.	22/1/25	Azure Devops Project Setup and User Story Management.
3.	29/1/25	Setting Up Epics, Features, And User Stories for Project Planning.
4.	12/2/25	Sprint Planning.
5.	19/2/25	Poker Estimation.
6.	26/2/25	Designing Class and Sequence Diagrams for Project Architecture.
7.	05/3/25	Designing Architectural and ER Diagrams for Project Structure.
8.	26/3/25	Testing – Test Plans and Test Cases.
9.	16/4/25	Load Testing and Pipelines.
10.	23/4/25	GitHub: Project Structure & Naming Conventions.

EXP NO: 1

AZURE DEVOPS ENVIRONMENT SETUP

Aim:

To set up and access the Azure DevOps environment by creating an organization through the Azure portal.

INSTALLATION

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-us/get-started/azure-portal>.

Sign in using your Microsoft account credentials.

If you don't have a Microsoft account, you can create one here: <https://signup.live.com/?lic=1>

2. Azure home page

The screenshot shows the Microsoft Azure home page. At the top, there's a navigation bar with tabs for 'microsoft azure portal - Yahoo' and 'My Dashboard - Microsoft Azure'. Below the bar is a search bar with placeholder text 'Search resources, services, and docs (G+/-)'. To the right of the search bar are icons for Copilot, notifications, settings, and user profile. The main content area has a dark background. On the left, there's a sidebar with 'Azure services' and 'Resources' sections. Under 'Azure services', there are icons for 'Create a resource', 'Azure DevOps organizations', 'Quickstart Center', 'Azure AI services', 'Kubernetes services', 'Virtual machines', 'App Services', 'Storage accounts', 'SQL databases', and 'More services'. Under 'Resources', there are tabs for 'Recent' (which is selected) and 'Favorite'. A table below shows columns for 'Name', 'Type', and 'Last Viewed'. A message 'No resources have been viewed recently' is displayed, along with a 'View all resources' button. At the bottom, there's a 'Navigate' section with links for 'Subscriptions', 'Resource groups', 'All resources', and 'Dashboard'.

3. Open DevOps environment in the Azure platform by typing **Azure DevOps Organizations** in the search bar.

This screenshot is similar to the previous one, showing the Microsoft Azure home page. However, the search bar now contains the text 'Devops'. The rest of the interface, including the sidebar, resource table, and navigation links at the bottom, remains the same.

4. Click on the **My Azure DevOps Organization** link and create an organization and you should be taken to the Azure DevOps Organization Home page.

Result:

Successfully accessed the Azure DevOps environment and created a new organization through the Azure portal.

CS23432

EXP NO: 2

AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT

Aim:

To set up an Azure DevOps project for efficient collaboration and agile work management.

1. Create An Azure Account

2. Create the First Project in Your Organization

a. After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.

b. On the organization's **Home page**, click on the **New Project** button.

c. Enter the project name, description, and visibility options:

Name: Choose a name for the project (e.g., **LMS**).

Description: Optionally, add a description to provide more context about the project.

Visibility: Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).

d. Once you've filled out the details, click **Create** to set up your first project.

Create new project

Project name *

Description

Visibility

Public
Anyone on the internet can view the project. Certain features like TFVC are not supported.

Private
Only people you give access to will be able to view this project.

Public projects are disabled for your organization. You can turn on public visibility with [organization policies](#).

Advanced

Cancel Create

- Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

The screenshot shows the Azure DevOps Organizations interface. On the left, there's a profile section for 'Harish Tutu YT' with a purple circular icon containing 'HY'. Below it, there's contact information: email '231801050@rajalakshmi.edu.in', a dropdown for 'Microsoft account', location 'India', and email again. Underneath, there's a 'Visual Studio Dev Essentials' section with a brief description and a 'Use your benefits' link. On the right, the main dashboard displays the 'Azure DevOps Organizations' header with a 'Create new organization' button. It lists the project 'dev.azure.com/TO-DO-LIST-APP (Owner)' with a status of 'Active'. Below the project name is a 'Actions' section with a 'New project' link. A vertical scrollbar is visible on the right side of the dashboard area.

4. Project dashboard

The screenshot shows the Azure DevOps project dashboard for 'TO-DO LIST APP WITH REMINDERS'. The top navigation bar includes links for 'microsoft portal - Yahoo', 'Azure DevOps - Microsoft Azure', 'My Information', and 'Summary - Overview'. The main content area features a large title 'TO-DO LIST APP WITH REMINDERS' with a 'Public' and 'Invite' button. To the left is a sidebar with project navigation links: Overview, Summary (which is selected), Dashboards, Wiki, Boards, Repos, Pipelines, Test Plans, Artifacts, and Project settings. The main content area contains three main sections: 'About this project', 'Project stats', and 'Members'. The 'About this project' section has a brief description of the app. The 'Project stats' section shows '12 Work items created' and '0 Work items completed'. The 'Members' section shows five team members represented by colored icons: DR (dark red), HY (purple), GR (red), DS (dark blue), and DK (blue). A search bar and a 'Period: Last 7 days' dropdown are also present in the top right of the main content area.

5. To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

The screenshot shows the Azure DevOps interface for managing work items. The left sidebar is titled 'TO-DO LIST APP WITH REMINDERS' and includes options like Overview, Boards, Work items (which is selected), Boards, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Project settings. The main area is titled 'Work items' and shows a table with one row of data. The columns are ID, Title, Assigned To, State, and Area Path. The data row is: ID 1, Title 'DEVELOP A TO-DO LIST APP WITH REMINDERS', Assigned To 'Unassigned', State 'New', and Area Path 'TO-DO LIST.'. There are also buttons for 'New Work Item', 'Open filtered view in Queries', 'Column Options', and a search bar.

ID	Title	Assigned To	State	Area Path
1	DEVELOP A TO-DO LIST APP WITH REMINDERS	Unassigned	New	TO-DO LIST.

Result:

Successfully created an Azure DevOps project with user story management and agile workflow setup.

EXP NO: 3

SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

Aim:

To learn about how to create epics, user story, features, backlogs for your assigned project.

Create Epic, Features, User Stories, Task

The screenshot shows the Azure DevOps interface for managing work items. The left sidebar is titled 'Work items' and includes options like Boards, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Project settings. The main area is titled 'Work items' and shows a table with columns: ID, Title, Assigned To, State, and Area Path. There are five entries listed:

ID	Title	Assigned To	State	Area Path
1	DEVELOP A TO-DO LIST APP WITH REMINDERS	Unassigned	New	TO-DO LIST
4	Reminder Notifications	Unassigned	New	TO-DO LIST
5	Task Categorization & Priority Levels	Unassigned	New	TO-DO LIST
3	Task Creation, Editing, and Deletion	Unassigned	New	TO-DO LIST
2	User Authentication & Profile Management	Unassigned	New	TO-DO LIST

1. Fill in Epics

The screenshot shows the Azure DevOps interface for creating a new work item. The left sidebar is identical to the previous screenshot. The main area is titled 'Recently updated' and shows a single entry: 'EPIC 1'. The details for this epic are as follows:

State	New	Area	TO-DO LIST APP WITH REMINDERS
Reason	New	Iteration	TO-DO LIST APP WITH REMINDERS

The epic has a description: 'This epic covers the development of a to-do list application with task management, reminders, and notifications.' It also includes sections for 'Planning' (Priority: 2, Risk), 'Deployment' (with a note about tracking releases), 'Development' (Add link, Link an Azure Repos), and 'Discussion' (with a comment placeholder).

2. Fill in Features

The screenshot shows the Azure DevOps Work Items page for a project titled "TO-DO LIST APP WITH REMINDERS". A feature named "4 Reminder Notifications" is selected. The "Description" section contains a bulleted list of requirements: "Description: Users should receive timely reminders for their pending tasks." and "Key Functionalities: Set reminders for tasks., Receive push notifications before the task deadline., Snooze or dismiss reminders.". The "Planning" section includes fields for Priority (2), Risk, Effort, and Business Value. The "Deployment" section contains a note about tracking releases. The "Development" section has a "Link an Azure Repos" button.

3. Fill in User Story Details

The screenshot shows the Azure DevOps Work Items page for a project titled "TO-DO LIST APP WITH REMINDERS". A user story named "9 As a user, I want to create a new task so that I can keep track of my work." is selected. The "Description" section states: "Users should be able to add a task with a title, description, and due date." The "Acceptance Criteria" section lists: "Users can enter a task title and description., Users can set a due date., Task should be saved and displayed in the task list.". The "Planning" section includes fields for Story Points (5), Priority (2), and Risk. The "Classification" section includes fields for Value area (Business). The "Deployment" section contains a note about tracking releases. The "Development" section has a "Link an Azure Repos" button.

Result:

Thus, the creation of epics, features, user story and task has been created successfully.

EXP NO: 4

SPRINT PLANNING

Aim:

To assign user story to specific sprint for the Music Playlist Batch Creator Project.

Sprint Planning

Sprint 1

The screenshot shows the Azure DevOps Taskboard for the 'TO-DO LIST APP WITH REMINDERS' project. The left sidebar is open with 'Sprints' selected. The main area displays the 'Taskboard' for 'Sprint 1' from February 21 to March 21. There are four cards visible:

- User Story 6:** As a user, I want to register and log in so that I can access my tasks securely.
 - Status: New
 - Assignee: Unassigned
- User Story 18:** Implement user authentication (Sign-up, Login, Logout).
 - Status: New
 - Assignee: Dhanush R
- User Story 7:** As a user, I want to manage my profile so that I can update my details.
 - Status: New
 - Assignee: Unassigned
- User Story 19:** Develop profile update functionality (name, email, password).
 - Status: New
 - Assignee: Dhanush R

Sprint 2

The screenshot shows the Azure DevOps Taskboard for the 'TO-DO LIST APP WITH REMINDERS' project. The left sidebar is open with 'Sprints' selected. The main area displays the 'Taskboard' for 'Sprint 2' from March 22 to April 22. There are four cards visible:

- User Story 9:** As a user, I want to create a new task so that I can keep track of my work.
 - Status: New
 - Assignee: Unassigned
- User Story 21:** Develop UI & API for adding new tasks.
 - Status: New
 - Assignee: Harish Tutu YT
- User Story 10:** As a user, I want to edit an existing task so that I can update my plans.
 - Status: New
 - Assignee: Unassigned
- User Story 22:** Implement functionality for modifying task details.
 - Status: New
 - Assignee: Daksh Khinvasa...

Sprint 3

The screenshot shows the Azure DevOps Taskboard for the 'TO-DO LIST APP WITH REMINDERS Team' in 'Sprint 3'. The taskboard displays four items:

- 12** As a user, I want to set reminders for my tasks so that I don't forget them.
 - New
 - Unassigned
- 24** Develop reminder scheduling system
 - New
 - Dinesh S
- 13** As a user, I want to receive notifications for my tasks so that I can complete them on time.
 - New
 - Unassigned
- 25** Implement push notifications for upcoming tasks
 - New
 - Dinesh S

The taskboard includes filters for 'Sprint 3' and 'Person: All'. The timeline shows '23 April - 10 May' with '13 work days'.

Sprint 4

The screenshot shows the Azure DevOps Taskboard for the 'TO-DO LIST APP WITH REMINDERS Team' in 'Sprint 4'. The taskboard displays four items:

- 16** As a user, I want to set priority levels for tasks so that I can focus on important ones first.
 - New
 - Unassigned
- 26** Add priority selection (High, Medium, Low) while creating a task
 - New
 - Gaurav Ramas... (red)
- 17** As a user, I want to filter tasks based on priority so that I can focus on specific tasks.
 - New
 - Unassigned
- 27** Implement filtering feature for tasks by priority level
 - New
 - Gaurav Ramas... (red)

The taskboard includes filters for 'Sprint 4' and 'Person: All'. The timeline shows '11 May - 23 May' with '10 work days'.

Result:

The Sprints are created for the To-do list app with reminders project.

EXP NO: 5

POKER ESTIMATION

Aim:

Create Poker Estimation for the user stories - To-do list app with reminders project.

Poker Estimation

USER STORY 6

6 As a user, I want to register and log in so that I can access my tasks securely.

DESIGNING CLASS AND SEQUENCE DIAGRAMS FOR PROJECT ARCHITECTURE

Aim:

To Design a Class Diagram and Sequence Diagram for the given Project.

6A. Class Diagram

6B. Sequence Diagram

Result:

The Class Diagram and Sequence Diagram is designed Successfully for the To-do list app with reminders project.

EXP NO: 7

DESIGNING ARCHITECTURAL AND ER DIAGRAMS FOR PROJECT STRUCTURE

Aim:

To Design an Architectural Diagram and ER Diagram for the given Project.

7A. Architectural Diagram

7B. ER Diagram

Result:

The Architecture Diagram and ER Diagram is designed Successfully for the To-do list app with reminders project.

EXP NO: 8	TESTING – TEST PLANS AND TEST CASES
------------------	--

Aim:

To give test cases for the To-Do List App showcasing both the happy path (expected scenarios) and error path (unexpected scenarios).

Test Planning and Test Case**Test Case Design Procedure****1. Understand Core Features of the Application**

- User signup, login, logout, and profile management
- Creating, editing, and deleting tasks
- Setting task reminders and receiving notifications
- Setting and filtering task priorities

2. Define User Interactions

- Each test case is based on real user actions like registering, creating tasks, setting reminders, etc.

3. Design Happy Path Test Cases

- These validate that all core functionalities work as expected under normal conditions..

4. Design Error Path Test Cases

- Simulate negative or unexpected behavior like login failures or invalid inputs.

5. Break Down Steps and Expected Results

- Each test case includes step-by-step user actions and the expected outcome

6. Use Clear Naming and IDs

- Example: TC01-Successful-Login, TC05-Task-Reminder-Failure

7. Separate Test Suites

- Group test cases based on modules: Authentication, Task Management, Reminders, Priority Handling, Security.

8. Prioritize and Review

- High-priority test cases are assigned to core features like login, task creation, and reminder notifications.

1. New test plan

The screenshot shows the 'Test Plan' page for the 'TO-DO LIST APP'. The main header displays the project name and the specific test plan ID (28). The left sidebar includes links for Overview, Boards, Repos, Pipelines, Test Plans, and Artifacts. The central area shows the 'TEST PLAN 28' details, including the owner (Harish Tutu YT), state (Active), reason (New test plan), area (TO-DO LIST APP WITH REMINDERS), and iteration (TO-DO LIST APP WITH REMINDERS). A 'Description' section contains a placeholder for adding a description. A 'Timelines' section shows the start date (15-04-2025 15:09) and finish date (22-04-2025 15:09). A 'Discussion' section allows for comments using Markdown syntax. At the bottom, there are buttons for 'Save and Close', 'Follow', and 'Details'.

2. Test suite

The screenshot shows the 'Task management' page for the 'TO-DO LIST APP'. The left sidebar lists 'Overview', 'Boards', 'Repos', 'Pipelines', 'Test Plans', 'Test plans' (which is selected), 'Progress report', 'Parameters', 'Configurations', 'Runs', and 'Artifacts'. The main area displays a 'Test Suites' section for 'TO-DO LIST APP' under 'Authentication (3)'. A context menu is open over the 'New Suite' option, showing options like 'Static suite', 'Requirement based suite', and 'Query based suite'. The 'Test Cases' section lists four items: 'Create Task', 'Edit Task', 'Delete Task', and 'Delete Task' (with IDs 34, 36, and 39 respectively). There are tabs for 'Define', 'Execute', and 'Chart'.

3. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

To-Do List App – Test Plans

Test Suites

Test Suit: TS01 - User Authentication

1. TC01 – User Registration & Login

Action 1: Open the app and click “Register”.

Expected Result: Registration form appears.

Action 2: Enter valid name, email, and password, then click “Submit”.

Expected Result: Account created, redirected to login page.

Action 3: Enter credentials and click “Login”.

Expected Result: Dashboard loads, user successfully logged in.

2. TC02 – Manage Profile

Action 1: Click on “Profile” in the navigation bar.

Expected Result: Profile details are displayed.

Action 2: Click “Edit”, change user info (e.g., name).

Expected Result: Editable fields appear.

Action 3: Click “Save Changes”.

Expected Result: Profile updated confirmation appears.

3. TC03 – Logout

Action 1: Click on “Logout” button from dashboard.

Expected Result: Logout confirmation popup appears.

Action 2: Confirm logout.

Expected Result: User is logged out.

Action 3: Try accessing dashboard URL directly.

Expected Result: Redirected to login page.

Test Suit: TS02 – Task management

1. TC04 – Create Task

Action 1: Click “Add New Task”.

Expected Result: Task creation form opens.

Action 2: Fill in task title, due date, priority, and click “Save”.

Expected Result: Task added to list.

Action 3: View the dashboard.

Expected Result: Newly created task appears in “Upcoming Tasks”

2. TC05 – Edit Task

Action 1: Click the “Edit” icon next to a task.

Expected Result: Task fields become editable.

Action 2: Change title or date.

Expected Result: Fields accept new values.

Action 3: Click “Update”.

Expected Result: Task details are updated in task list.

3. TC06 – Delete Task

Action 1: Click on the “Delete” button of a task.

Expected Result: Confirmation dialog appears.

Action 2: Click “Yes, Delete”.

Expected Result: Task is removed from the list.

Action 3: Refresh the page.

Expected Result: Task no longer appears.

Test Suit: TS03 – Reminder & notification

1. TC07 – Set Reminders

Action 1: Click “Set Reminder” on a task.

Expected Result: Date and time input appears.

Action 2: Set future time and save.

Expected Result: Reminder is saved.

Action 3: Wait till reminder time.

Expected Result: Notification or alert is triggered.

2. TC08 – Notifications

Action 1: Ensure a task has a reminder set.

Expected Result: Reminder time shows in UI.

Action 2: Wait until the task time arrives.

Expected Result: App shows a popup or notification.

Action 3: Click the notification.

Expected Result: User navigates to the task.

3. TC09 – Set Task Priority

Action 1: Click “New Task”, set priority as “High”.

Expected Result: Priority dropdown is available and saves input.

Action 2: Save the task.

Expected Result: Priority level shows in task card.

Action 3: Hover or click task for details.

Expected Result: Priority tag (e.g., red for high) is visible.

4. TC10 – Filter Tasks by Priority

Action 1: Click “Filter” and choose “High Priority”.

Expected Result: Filter activates.

Action 2: View task list.

Expected Result: Only high-priority tasks are visible.

Action 3: Remove filter.

Expected Result: All tasks become visible again.

Test Cases

The screenshot shows the Azure DevOps Test Plan interface. The URL in the browser is https://dev.azure.com/TO-DO-LIST-APP/TO-DO%20LIST%20APP%20WITH%20REMINDERS/_testPlans/define?planId=28&suiteId=30. The page displays a test case titled "33 User Registration & Login" created by Dinesh S. The test case is in the "Design" state and is associated with the "TO-DO LIST APP WITH REMINDERS" area and iteration. The "Steps" tab is selected, showing three steps: 1. Open the app and click "Register". Expected result: Registration form appears. 2. Enter valid name, email, and password, then click "Submit". Expected result: Account created, redirected to dashboard. 3. Enter credentials and click "Login". Expected result: Dashboard loads, user success. The "Deployment" and "Development" sections are also visible.

4. Installation of test

Test and feedback

Showing it as an extension

The screenshot shows the Azure DevOps Test Plan interface. On the left, there's a sidebar with various icons for Test Cases, Test Suites, Pipelines, and Artifacts. The main area displays a test case titled "33 User Registration & Login". The "Steps" section contains three steps: 1. Open the app and click "Register". Expected result: Registration form appears. 2. Enter valid name, email, and password, then click "Submit". Expected result: Account created, redirected to dashboard. 3. Enter credentials and click "Login". Expected result: Dashboard loads, user successfully logged in. Below the steps is a placeholder "Click or type here to add a step". On the right, a dark-themed sidebar is open under the heading "Extensions". It lists extensions with "Full access": "Allow Copy - Select & En...", "Blend & Run: Enable copy...", "Test & Feedback" (which is highlighted in purple), and "Manage extensions". A tooltip for "Test & Feedback" provides instructions on tracking releases and deployment status reporting. Below this is a "Development" section with a "Add link" button and a note about linking to Azure Repos.

5. Running the test cases

The screenshot shows the Azure DevOps Test Plan interface for the 'TO-DO LIST APP'. The left sidebar shows the project navigation with 'Test Plans' selected. The main area displays the 'Authentication (ID: 30)' test plan. Under 'Test Points (3 items)', the 'User Registration & Login' point is selected and shown in detail. A context menu is open over this point, with 'Run for web application' highlighted. Other options in the menu include 'Run for desktop application', 'Run with options', 'Edit test case', 'Assign tester', and 'View test result'. The status bar at the bottom indicates 'Apr 15 - Apr 22', '100% run, 100% passed', and a link to 'View report'.

6.

The screenshot shows the 'Runner - Test Plans - Google Chrome' interface. It displays a test scenario titled '33: User Registration & Login'. Step 1, 'Open the app and click "Register"', has an 'EXPECTED RESULT' section stating 'Registration form appears.' Step 2, 'Enter valid name, email, and password, then click "Submit".', has an 'EXPECTED RESULT' section stating 'Account created, redirected to login page.' Step 3, 'Enter credentials and click "Login".', has an 'EXPECTED RESULT' section stating 'Dashboard loads, user successfully logged in.' The browser toolbar includes 'Save and clo...', 'Create bug', and other standard browser controls.

8. Test case results

The screenshot shows the Azure DevOps interface for a 'TO-DO LIST APP WITH REMINDERS' project. The left sidebar is open with 'Test Plans' selected. In the center, under 'Test Suites', there is a section for 'Task management (3)'. A modal window titled 'Test Case Results' is displayed, listing execution details for various test points. The columns include Outcome (Passed, Failed), TimeStamp, Configuration (Windows 10), Run by (Harish Tutu YT), Tester (Harish Tutu YT), and Test Point ID (TO-DC). The data is as follows:

Outcome	TimeStamp	Configuration	Run by	Tester	Test Point
Passed	2h ago	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Failed	2h ago	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Passed	Wednesday	Windows 10	Gaurav Ramasubram...	Harish Tutu YT	TO-DC
Passed	Wednesday	Windows 10	Gaurav Ramasubram...	Harish Tutu YT	TO-DC
In Progress	Wednesday	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Passed	Wednesday	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Passed	Wednesday	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Failed	Wednesday	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC
Failed	Wednesday	Windows 10	Harish Tutu YT	Harish Tutu YT	TO-DC

9. Test report summary

The screenshot shows the 'Create Task' form for a test case. The task title is '34 Create Task'. The 'State' dropdown is set to 'Design'. The 'Reason' dropdown shows 'Ready' as the selected option. The 'Steps' tab is active, displaying the following steps:

- Click "Add New Task"...
- Fill in task title, due date, priority, and click "Save".
- View the dashboard.

The 'Expected result' column indicates that the task creation form opens, a task is added to the list, and a newly created task appears in the dashboard. The 'Deployment' and 'Development' sections are also visible on the right side of the form.

10. Progress report

Result:

The test plans and test cases for the user stories is created in Azure DevOps with Happy Path and Error Path

EXP NO: 9	LOAD TESTING AND PIPELINES
-----------	-----------------------------------

Aim:

To create an Azure Load Testing resource and run a load test to evaluate the performance of a target endpoint and to create and demonstrate an Azure DevOps pipeline for automating application builds, tests, and deployment.

Load Testing**Azure Load Testing:**

Azure Load Testing allows you to simulate high traffic and stress tests for your web applications and APIs to understand how they perform under load. It helps identify performance bottlenecks, scalability issues, and optimize resource usage before deployment.

Steps to Create an Azure Load Testing Resource:

Before you run your first test, you need to create the Azure Load Testing resource:

1. Sign in to Azure Portal
Go to <https://portal.azure.com> and log in.
2. Create the Resource
 - o Go to *Create a resource* → Search for “Azure Load Testing”.
 - o Select Azure Load Testing and click Create.
3. Fill in the Configuration Details
 - o *Subscription*: Choose your Azure subscription.
 - o *Resource Group*: Create new or select an existing one.
 - o *Name*: Provide a unique name (no special characters).
 - o *Location*: Choose the region for hosting the resource.
4. (Optional) Configure tags for categorization and billing.
5. Click "Review + Create," then "Create."
6. Once the deployment is complete, click on 'Go to resource.'

Steps to Create and Run a Load Test:

Once your resource is ready:

1. Go to your Azure Load Testing resource and click Add HTTP requests > Create.
2. Basics Tab
 - o *Test Name*: Provide a unique name.
 - o *Description*: (Optional) Add test purpose.
 - o *Run After Creation*: Keep checked.
3. Load Settings
 - o *Test URL*: Enter the target endpoint (e.g., <https://yourapi.com/products>).
4. Click Review + Create → Create to start the test

Load Testing

Pipelines

Description:

This experiment demonstrates connecting a GitHub-hosted Flask-based music recommendation project with Azure DevOps. The pipeline will automatically install dependencies, run basic tests, and publish artifacts. This ensures that every commit triggers checks for reliability and smooth deployment.

Steps:

1. Connect GitHub to Azure DevOps:
 - o In Azure DevOps, create a new project.
 - o Create a pipeline and select GitHub as the source.
 - o Authorize access to your GitHub repository, ensuring that Azure DevOps can pull the repository for your pipeline.
2. Create azure-pipelines.yml in Your Repo Root:
 - o In your GitHub repository, create a new file called azure-pipelines.yml in the root directory.
 - o Add the following basic pipeline configuration for Python and Flask:

yml Code

```
trigger:
  - main # Trigger pipeline when changes are pushed to the main branch

pool:
  vmImage: ubuntu-latest # Use a hosted Ubuntu agent

steps:
# Step 1: Checkout the code from GitHub
- checkout: self

# Step 2: Set up Python environment
- task: UsePythonVersion@0
  inputs:
    versionSpec: '3.x' # Use the latest Python 3.x version
    displayName: "Set up Python"

# Step 3: Install dependencies from the correct path
- script: |
    python -m pip install --upgrade pip
    pip install -r project/requirements.txt # Adjusted path to requirements.txt
    displayName: "Install dependencies"

# Step 4: Run a simple Python script to check the environment
- script: |
    python -c "print('Hello from TO-DO LIST APP WITH REMINDERS!')"
    displayName: "Run a Python script"
```

3. Pipeline Tasks Include:

- Setting up the Python environment using the UsePythonVersion task.
- Installing project dependencies from project/requirements.txt. Ensure the path to requirements.txt is correct (located under the project folder).
- Running a simple Python script to verify that Python is set up correctly and the pipeline works.

4. Run and Monitor Pipeline:

- Commit changes to the main branch of your repository to trigger the pipeline in Azure DevOps.
- Monitor the logs in the Azure DevOps portal to view logs, errors, or success messages and ensure everything runs smoothly.

Pipeline

The screenshot shows the Azure DevOps interface for a pipeline run. The left sidebar is titled 'TO-DO LIST APP WITH REMINDERS' and includes links for Overview, Boards, Repos, Pipelines (which is selected), Environments, Library, Test Plans, and Artifacts. Below the sidebar is a 'Project settings' link. The main content area displays a summary of a pipeline run:

- Run ID:** #20250426.2 • Create todo_app.py
- Owner:** HarishTUTU.Software-construction-
- Status:** Success
- Retention:** This run is being retained as one of 3 recent runs by pipeline. (View retention leases)
- Summary:** Manually run by Gaurav Ramasubramaniam. Repository and version: HarishTUTU/Software-construction- · main · ecae0e9a. Time started and elapsed: Yesterday at 2:05 PM · 21s. Related: 0 work items. Tests and coverage: 1 published.
- Jobs:** A table showing a single job named 'Job' with status 'Success' and duration '5s'.

Result:

Successfully created the Azure Load Testing resource and executed a load test to assess the performance of the specified endpoint and also demonstrated pipelines in azure devops.

EXP NO: 10

GITHUB: PROJECT STRUCTURE & NAMING CONVENTIONS

Aim:

To provide a clear and organized view of the project's folder structure and file naming conventions, helping contributors and users easily understand, navigate, and extend the TO-DO LIST APP WITH REMINDERS project.

GitHub Project Structure

The screenshot shows the GitHub repository page for 'TO-DO-LIST-APP-WITH-REMINDERS'. The repository is public and has 1 branch and 0 tags. The main branch has 10 commits. The repository has 0 stars, 1 watcher, and 0 forks. There are sections for Activity, Releases, Packages, and Languages. The Languages section shows HTML at 70.1% and Python at 29.9%.

File/Folder	Action	Time
HarishTUTU Add files via upload		de79767 - 1 minute ago
Architecture Diagram	Add files via upload	10 minutes ago
Backlog	Add files via upload	10 minutes ago
Pipelines	Add files via upload	10 minutes ago
Poker Estimation	Add files via upload	1 minute ago
Progress Report	Add files via upload	10 minutes ago
Project	Add files via upload	1 minute ago
Sequence Diagram	Add files via upload	10 minutes ago
Sprints	Add files via upload	1 minute ago
Test Plans And Test Cases	Add files via upload	10 minutes ago
azure-pipelines.yml	Rename azure-pipelines-1.yml to azure-pipelines.yml	44 minutes ago

Result:

The GitHub repository clearly displays the organized project structure and consistent naming conventions, making it easy for users and contributors to understand and navigate the codebase.
